Results

Plasma EV miR-26a-5p levels were increased in PsA relative to cutaneous psoriasis ($p < 0.001$).

In contrast, miR-192-5p was decreased in PsA versus PsC ($p = 0.02$).

Table 3. miR-26a-5p PsA 3.8 +/- 0.3 (SEM) n=30; PsC 2.7 +/- 0.25 (SEM) n=28
